

DESIGNED, BUILT & MAINTAINED
BY ASTON MARTIN
AT NEWPORT PAGNELL
bring your V8 home

First introduced in 1972, the Aston Martin V8 model range was designed and built at Newport Pagnell. What was once a triumph in hand built, British engineering, is now an appreciating classic that deserves professional maintenance and care. Where better to have such a valuable possession looked after than its birthplace at Newport Pagnell.

Here at Aston Martin Works Service in our newly expanded Heritage department we offer highly competitive menu-priced servicing, MOTs, bespoke upgrades and will carry out any repair or restoration work you require.

If you are fortunate enough to own one of these iconic cars, why not give the Heritage team a call. We would be delighted to discuss your personal requirements.

STOP MORE QUICKLY AND WITH CONFIDENCE

Brake technology has moved on from the '70s and '80s. Stopping distances on more recent cars have decreased and continue to decrease.

With that in mind we are now offering upgrades to dramatically improve the braking performance of the V8 and its derivatives (cars built between 1972-1989). These upgrades have been engineered and, very importantly, fully tested in conjunction with AP Racing UK, the country's leading OE and aftermarket brake development company, and offer modern high specification components to complement and improve the V8's original systems. Call the Heritage team now for more details.
